

SECURE REMOTE ACCESS & FIELD INTELLIGENCE PLATFORM

UpDesk

Four secure solutions to see, control and record — from anywhere.

UpDesk lets a control room reach any authorised phone or computer in real time — for live remote control, 24/7 camera-microphone-GPS field intelligence, and sealed, court-ready evidence. It runs entirely on your own private, government-controlled server.

UpDesk Host — Phone Remote Control

ANDROID · PHONE

The control room sees and operates any authorised officer's phone live — to assist, verify and act instantly, without travelling to the location.

- **Field device support.** Configure, update or repair an officer's phone directly from headquarters. Settings, apps and connectivity problems are resolved in minutes, with no one dispatched to the field.
- **Guided operation.** Take control of the officer's screen and walk them through any app or form, step by step — ideal when an officer is new to a procedure or under pressure at a scene.
- **On-scene verification.** See exactly what is displayed on a device in the field, in real time. Confirm information, readings or on-screen records the moment they are needed.
- **Instant data retrieval.** Open messages, photos, documents or app data on the device and pull what is required immediately, without waiting for the phone to be brought in.
- **Live troubleshooting.** Diagnose and fix a malfunctioning app or setting while the officer watches, turning a long support call into a quick, visual fix.
- **Remote device management.** Set up new department phones, push configuration, or lock down a lost or misused handset — all centrally from the control room.
- **Procedure demonstration.** Show officers at remote posts exactly how a task is done by performing it on their own screen — far clearer than verbal instructions.
- **Screen evidence capture.** Record and save whatever appears on the device, stamped with the exact date and time, for records or investigation.
- **Faster response.** Because nothing requires a technician to travel, device problems that once took a day are handled in minutes from a single desk.
- **Chain-of-custody logging.** Every file transferred to or from the device is automatically logged with a tamper-proof digital fingerprint, so its integrity can always be proven.

UpDesk Field — Live Camera, Mic & Location

ANDROID · 24/7 FIELD

A phone that quietly streams its camera, microphone and exact GPS location to the control room around the clock — a body-cam and tracker in one, running unattended.

- **Live field camera.** The phone's camera streams continuous video to the control room, giving commanders a real-time eye on the ground, exactly as the officer sees it.
- **Real-time GPS tracking.** The device's precise location is reported continuously and drawn as a moving trail on a live map, so a unit's position and route are always known.
- **Covert observation.** A phone can be discreetly placed to watch a location of interest and quietly relay everything it sees and hears back to headquarters.
- **Live audio monitoring.** Alongside the video, the microphone streams live sound from the scene, so the control room can hear events as they happen.
- **24/7 unattended operation.** The device runs on its own with no one touching it, and automatically comes back online after a restart, power cut or loss of signal.
- **Sealed evidence recording.** Any audio or video can be saved with a tamper-proof digital seal, the recording officer's name and an exact timestamp — ready to stand as court evidence.
- **Crowd & event monitoring.** Watch gatherings, rallies or public events live from a safe distance, improving situational awareness without exposing personnel.
- **Suspect movement tracking.** Follow and record a target's movements over time, building a verifiable location history for an investigation.
- **Field-team coordination.** Multiple field devices give the command centre a live, shared picture, so units can be directed accurately and safely.
- **Remote-post surveillance.** Provide continuous eyes and ears on borders, checkpoints, forests or other sensitive sites where a permanent camera is impractical.

03 / 04

UpDesk Host — Computer Remote Control

WINDOWS · COMPUTER

The control room views and operates any authorised computer live — for support, collaboration and secure operation of office and specialist machines, all from one desk.

- **Remote IT support.** Fix department computers — software, settings, updates — without sending a technician to the site, cutting resolution time dramatically.
- **Access office files.** Reach case files, records or applications on an office PC from anywhere, so work is never blocked by physical distance.
- **Live collaboration.** Two people can view and work on the same screen at once, making joint review of documents or investigations fast and clear.
- **Software demonstration.** Train staff on a new application by operating it on their own machine while they watch — far more effective than a manual.
- **Specialist workstation operation.** Run a specialised or licensed system that exists on only one machine, from anywhere, without moving the officer to it.
- **Secure file transfer.** Move files to and from the computer with every transfer logged and digitally sealed for chain of custody.
- **Session recording.** Capture an entire remote session as a recording, useful as training material or as an evidentiary record.
- **Reduced downtime.** Restore a critical system quickly and remotely, keeping essential services running with minimal interruption.
- **Live supervision.** Observe or audit work being done on a computer as it happens, supporting oversight and accountability.
- **State-wide reach.** Support and operate computers in offices across the entire state from a single control-room desk.

04 / 04

UpDesk Host Service — Silent 24/7 Access

WINDOWS · SILENT SERVICE

A background service that runs invisibly on a computer and stays reachable at all times — even when nobody is logged in — with a fixed ID and password, surviving reboots on its own.

- **24/7 availability.** Reach servers, kiosks, control-room screens and other unmanned computers at any hour, whether or not anyone is present.
- **No login required.** Connect to the machine even when it is sitting at the login screen with no user signed in — impossible with ordinary remote tools.
- **Automatic recovery.** After a restart, power cut or crash, the service brings itself back online and reconnects without anyone touching the machine.
- **Fully silent operation.** It runs invisibly in the background as a system service, needing no user action and leaving the machine free for its normal work.
- **Fixed credentials.** Each machine keeps a permanent ID and password, so authorised staff can connect whenever needed without on-site setup.
- **Infrastructure administration.** Manage and maintain critical systems and servers remotely and centrally, from one location.
- **Unattended forensic stations.** Keep evidence and analysis workstations under continuous watch, around the clock, even when the lab is empty.
- **Emergency access.** Get into a remote or locked office computer during an urgent situation, without waiting for someone to reach it.
- **After-hours maintenance.** Perform updates and servicing at night or on holidays with no staff present, avoiding disruption to daytime operations.
- **Fleet control.** Reach an entire set of always-on machines centrally — ideal for managing many sites from one command centre.

PRICING

The complete platform — owned by the department.

All four host applications, the control-room software, your own private secure server, and the evidence system — delivered, deployed and yours to keep.

₹3,00,000

One-time payment · Three Lakh Rupees · No per-user or recurring license fees

What's included

- ✓ **4 host applications** — two Android (Host, Field) and two Windows (Host, Service).
- ✓ **UpDesk Controller** — the control-room application used to connect and operate devices.
- ✓ **Private secure server** — encrypted and government-controlled, configured and set up for you.
- ✓ **Evidence & chain-of-custody** — sealed, hashed, time-stamped, court-ready recordings.
- ✓ **Deployment & training** — installation on your devices and operator hand-over.
- ✓ **Full ownership** — built in-house, so there is no foreign vendor dependency or recurring fee.
